## What is 48 Pieces?

48 Pieces is a new jigsaw puzzle game for iPhone and iPad.

## What Makes 48 Pieces Special?

The game was designed to capture the relaxing nature of jigsaw while taking advantage of mobile touchscreen devices. Everything from the way pieces can be flung across the table to the satisfying "snap" as they fall into place was crafted to be as delightful as possible.

Also, many games are designed to sell packs of puzzles to players. 48 Pieces differs from most in that players can create as many puzzles as they want and share them with others. In a way, this makes it akin to an app like Instagram with photos that you can put together.

## What Does It Cost?

48 Pieces is a free download on the App Store. Players can create as many puzzles as they want and download up to 5 puzzles shared by other players.

A paid Membership option allows players to download an unlimited number of puzzles and unlock 2 additional difficulty levels for more challenging play.

## Where Can I Get It?

Download 48 Pieces for free from the App Store by following this link:

## Who Created 48 Pieces?

48 Pieces was designed and developed by Jeff Campbell, an independent iOS software developer based in Burbank, California.

Jeff has completed over 900 puzzles in 48 Pieces thus far.
